DIGI® Network Systems IFIS-3600 & LFIS-3600
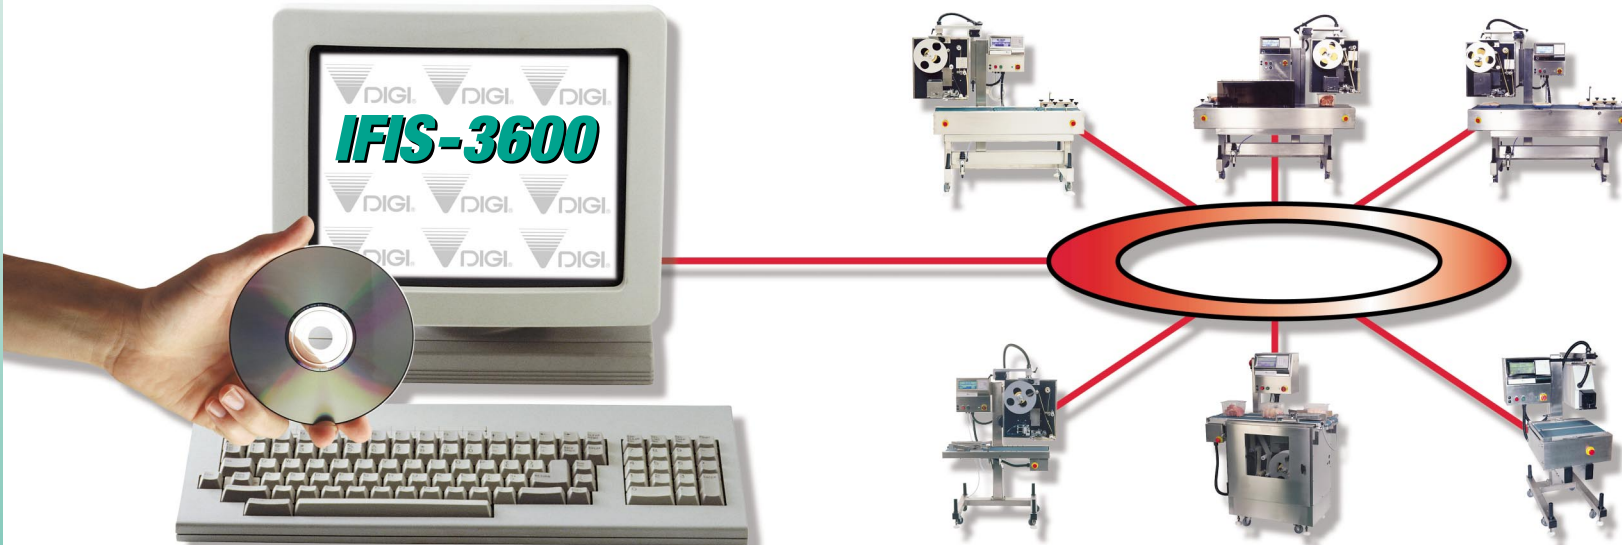

IFIS-3600

IFIS-3600 has been developed by DEL and is a new PC application program allowing up to 32 x DEL 3600 industrial machines to be networked together. PLU's and machine totals are controlled from one PC.

Features:

- User management utility, language editor, and scheduler.

- Existing PLU's, Text's and Ingredient's entered into the DEL 3600 can be imported directly into IFIS.

- IFIS data can be used by other PC applications to build graphical representations of the data.

- Windows 95, 98 and NT compatible.

LFIS-3600

LFIS-3600 is an additional software module for IFIS that allows label designs for the 3600 industrial machines to be constructed using a PC.

Features:

- Minimises machine downtime.

- Easy to use 'Drag & Drop' WYSIWYG graphical interface.

- Label background image import.

- Both normal and total labels can be designed.
