

Safeline AVS

TYPE 42P PIPELINE INSPECTION SYSTEMS

Inspecting pumped liquids and slurries

Ensure complete product integrity of pumped liquids and semi-solids automatically with the new generation of Safeline AVS intelligent product inspection systems.

The Type 42P Automatic Pipeline Inspection System uses advanced linear array detection technology that is unmatched in the industry for its sensitivity and sophistication.

This innovative inspection system is superior at automatically scanning pumped product to ensure optimum product quality, identifying and automatically rejecting non-conforming product.

What makes Safeline AVS systems superior?

The combination of Safeline AVS's "Low-Energy" inspection technology, innovative hardware and high performance image processing software give the systems an undeniable advantage on high-speed production lines. Rely on the Safeline AVS Type 42P System for maximum protection for your product and your Brand value.

TYPE 42P

- **Real-time Analysis of Pumpable Products such as Liquids, Slurries and Meat Products**

- **Monitor Product Attributes**

including fat/lean percentages, to ensure maximum product quality.

- **Detection and Elimination of Foreign Bodies**

including metal, stone, glass, bone, high density plastic and rubber.

- **Multiple Configurations Available, including Reject Valve**

Safeline AVS pipeline inspection systems can inspect virtually any product that can be pumped through a pipe.
