

THE BETTER WAY TO WASTE HANDLING

WASTE COMPACTORS

Efficient
Powerful
Cost Effective

Efficient
Powerful
Cost Effective

There is a waste compactor in the wide Thetford range to suit most installations from the smallest of factories and supermarkets to the largest industrial complexes, civic amenities and transfer stations. A full range of accessories enables any model in the range to be adapted easily to the user's specific system and type of waste. Thetford International also manufacture containers and allied equipment.

Member of the Environmental Services Association

FOR OVER THREE DECADES Thetford International has been responsive to customer requirements in the design and manufacture of waste compaction and handling equipment. It is this understanding of client needs that is paramount to Thetford International and helped us to become the market leader. Both portable and static compactors are available with a variety of hoppers, chutes and side or rear loading attachments to suit every waste environment.

New equipment can be purchased, rented or, alternatively, fully refurbished compactors can be supplied on short-term hire. With our fleet of fully trained engineers nationwide, we can provide full servicing, maintenance and steam cleaning 7 days a week. Full training of customer's operatives is given and they are presented with a certificate of competence.

FREE site surveys are carried out to advise on compaction and type of equipment to be used. All products are designed utilising CAD equipment and manufactured to fulfil all client's demands and bespoke systems. Proposal drawings can be produced showing location of compaction equipment for customer approval.

Thetford International is a member of waste industry organisations such as the Institute of Wastes Management (IWM), Environmental Services Association (ESA) and the Container Handling and Equipment Manufacturers (CHEM). Thetford International has been awarded ISO9002 demonstrating their commitment to customer service, and the continuation of product improvement.
